CASH-001

Claims

1.   A system for objects on a network, said system including

a receiver coupled to said network;

a cache engine operative to record a object from said network on mass storage;

wherein said cache engine is capable of selecting times to record said object, selecting locations to record said object, storing said object holographically so as to continue operation after loss of a portion of said mass storage, or minimizing time needed to write to said mass storage.
